About Me

I am a third-year Software Engineering student from South Africa, currently studying in Türkiye, with a strong interest in software development, system design, and intelligent systems. Through academic and hands-on projects, I have gained practical experience in web technologies, containerization, robotics systems, and data-based applications. I have worked with tools and platforms such as Docker, Apache Web Server, ROS on Ubuntu, and Python for data analysis and visualization. I enjoy solving real-world problems through technology, learning new technologies, and collaborating in team-oriented environments. I am seeking a software engineering internship where I can apply my technical knowledge, gain industry experience, and continue learning and developing in a professional environment.

Education

Konya Technical University

Bachelor of Science in Software Engineering

Expected Graduation: 2028

Relevant Coursework:

- Data Structures and Algorithms
- Object-Oriented Programming (OOP)
- Data Science
- Database Management Systems
- Software Engineering & Software Design
- Operating Systems (Linux / Ubuntu)
- Web Development
- Computer Networks

Technical Skills

Programming Languages: JavaScript, Python, Java, C

Web Technologies: HTML, CSS, React.js, Node.js, Express.js, REST APIs, Apache Web Server

Databases: MySQL, SQLite

DevOps & Systems: Docker, Linux (Ubuntu), Git, GitHub

Robotics & Middleware: ROS (Robot Operating System)

Data Analytics: Data cleaning and preprocessing, Exploratory Data Analysis (EDA), Data visualization, Basic statistical analysis, SPSS

Tools: VS Code, Jupyter Notebook, MySQL Workbench, Postman

Additional Skills

- Research and information gathering
- Clear written and verbal communication
- Willingness to learn and adapt
- Team collaboration

Projects

Telephone Number Validation System 2025

- Developed a web-based telephone number validation system using modern web technologies
- Deployed the system using Apache Web Server
- Containerized the application using Docker for consistent deployment

Autonomous House Cleaning Vacuum Cleaner 2025

- Developed an autonomous house cleaning vacuum cleaner system on Ubuntu Linux
- Used ROS for communication, navigation, and coordination between system components

Student Performance Data Analysis 2025

- Analyzed the Students Performance dataset as part of an Intro to Data Science course
- Performed data cleaning, preprocessing, and exploratory data analysis
- Created visualizations to identify patterns in academic performance
- Applied basic statistical techniques to interpret results

Mini CRM — Client Lead Management System 2026

- Built a full-stack CRM platform using React, Node.js, Express, and MySQL
- Developed REST API endpoints for lead management, notes, follow-ups, and pipeline tracking
- Implemented JWT authentication and bcrypt password hashing for secure admin access
- Created analytics dashboard with conversion metrics and lead-source visualization
- Designed responsive UI with real-time search, filtering, and dashboard components

Kota King — Fast Food Ordering Website 2026

- Developed a responsive business website for a local fast-food shop using HTML, CSS, and JavaScript
- Built a dynamic cart and WhatsApp ordering system with live price updates
- Implemented menu customization, quantity controls, and formatted order generation
- Added SEO optimization, Google Maps integration, and mobile-first responsive design

Personal Portfolio Website 2026

- Built a full-stack portfolio website using React, Node.js, Express, and MySQL
- Developed backend API for contact form submissions and email notifications
- Implemented dark/light theme system, animated UI effects, and responsive layouts
- Integrated form validation, rate limiting, and environment variable management

Languages

English: Fluent

Turkish: Fluent

Other: Native Languages
